

## Solis 3-piece Set Vacuum Containers

### DESCRIPTION

Vacuum containers are suitable for vacuum-packing fresh and dry food like fruit, vegetables and cereals as well as pureed fruit, and are just the perfect solution especially for pressure-sensitive and liquid food.

These vacuum containers are designed for long-term use. The vacuum-sealing process takes place by use of a suction hose that is included in this set and can be attached to the lid's air valve of the container to extract air.

These containers come in a set of three pieces with a capacity of 700, 1,400 and 2,000 ml, allowing you to vacuum-pack and store large quantities of food in the refrigerator, freezer (> -20 Å°C) or pantry. Storing food in vacuum containers in the freezer even protects it from freezer burn. These containers work with all Solis vacuum sealers featuring a hose connection.

All Solis vacuum containers are made of food-safe and BPA-free material for guaranteed safety and quality.
