

Solis Scala Zero Static Burr Grinder

DESCRIPTION

Make freshly ground coffee for all kinds of coffee preparations from filter coffee to caf   cr  me to real espresso. The grinder Solis Scala Zero Static also features 24 different grind settings and conical grinding burrs made of hardened stainless steel that effortlessly grind whole coffee beans. Its advanced ZeroStatic technology offers many benefits: by eliminating static charge of ground coffee, the waste of ground coffee is reduced, enhancing dosing consistency/precision and leaving your kitchen counter tidy and clean. The low speed of the double reduction gear unit allows for particularly aroma-friendly grinding.

The amount of ground coffee is controlled by an electronic timer and collected in a collection container. As small stones can also be found under the beans for some types of coffee, the appliance is also equipped with a stone safety device protecting the grinder from damage.

The transparent, aroma-preserving bean container made of SAN plastic holds up to 300 grams of beans and is removable for easy cleaning. The BPA-free plastic housing is equipped with a practical compartment to store and hide the cable of the grinder. An electronic start/stop button and non-slip feet ensure comfortable and safe operation.
