

Solis Flexi-Temp Kettle

DESCRIPTION

Did you know that for green and black tea you should not use the same water temperature? If you are passionate about tea, you will want a device that can accustom to such differences. The Flexi-Temp, hailed by tea lovers, is one of those. It is equipped with buttons allowing you to select different temperatures for different types of tea. From 40 °C up to 100 °C for a cup of black tea.

Life is too short to wait for water to boil. An acoustic signal will let you know when the water has reached its set temperature, so you can spend your time on something else while waiting for the water to reach the desired temperature. It will also keep warm for up to 30 minutes.

The use of high-quality materials such as hygienic stainless steel not only make the Solis Flexi-Temp Kettle look stylish in every home, its BPA-free plastic parts are even safer for your health.

With a power of up to 2,400 watts, the kettle boils water to the set temperature in little time even when fully filled.

The removable limescale filter improves the quality of the water and extends the life of the kettle sustainably. When there is no or too little water in the kettle or if it has already evaporated, the overheat protection switches the appliance off automatically. This function protects the appliance from permanent damage caused by excess temperatures.
